

# REDUCE CLEANING TIME BY AS MUCH AS 80%

Manufacturers will often pay a premium to keep their equipment clean and well maintained without having the equipment and personnel costs associated with owning the cleaning process.

Cold Jet's dry ice blast cleaning technology has the aggression needed to provide a thorough clean, while the dry ice pellets are non-abrasive, non-conductive and sublimate on impact.

Contract cleaners worldwide rely on Cold Jet's radial feed dry ice blast systems to quickly clean and restore building surfaces after years of soil, infestation of mold, or smoke and fire damage. The dry ice pellets disappear on impact thus eliminating the environmental problems associated with the disposal of waste water or grit blasting media. Here are some of the proven applications for Cold Jet Dry Ice Blasting:

Automotive Weld Line

Mold Remediation

Printing Press

Graffiti Removal

Fire Restoration

Historical Restoration

- Eliminate disassembly
- Eliminate media entrapment
- Non-abrasive process
- No secondary waste stream
- Increased operator safety
- 24/7 Customer Support
- Environmentally safe
- Non-conductive
